Electricity is a convenient energy source because it is easily transmitted over distance via electricity cables, and has a wide variety of uses. However, electricity goes to transformers to make it the correct voltage and then is supplied to homes and businesses through a network of cables and pylons.

Generation and transmission of electricity

Electricity is an energy currency, rather than an energy source, which means that electric generation needs to start from a primary energy flow. These fuels and flows are usually turned into electric current which transmits electric power to the grid. Power plants are the most commonly used energy conversion technology to create electricity from primary energy.
