The art of persuasion as taught by one of the world's most sought-after speakers and pitchmen In this daring book, Joel Bauer teaches you how to persuade by making your messages entertaining. Learn the secrets behind "The Fright Challenge," "The Transformation Mechanism," and other persuasion tactics used by pitchmen, carneys, and conjurors to convince people to their way of thinking. Along with coauthor Mark Levy, Bauer has taken these ethical, entertainment-based techniques, and has made them practical for everyday use-capable of influencing one person or a thousand, in business and in life. Joel Bauer (Los Angeles, CA) is an expert in performance-based live marketing who The Wall Street Journal online referred to as "undoubtedly the chairman of the board" of corporate tradeshow rain-making. Mark Levy (Chester, NJ) has written for the New York Times, has authored or coauthored three books, and is the founder of Levy Innovation, a consulting firm that makes individuals and companies memorable.

This book is a complete guide to the operation of the Nikon Coolpix P1000 digital camera. The book explains all shooting modes, menus, functions, and controls of this superzoom camera, illustrated by more than 300 full-color images. The guide shows beginning and intermediate photographers how to get excellent results using the many features of the P1000. The book explains topics such as autofocus, manual focus, HDR (High Dynamic Range) photography, ISO sensitivity, memory cards, and flash modes. It discusses techniques for using the P1000's phenomenal zoom lens, with a maximum optical focal length of 3000mm, to full advantage. The book also explains the camera's features for remote control and image transfer using a smartphone or tablet with the P1000's built-in Wi-Fi and Bluetooth capabilities, as well as the camera's features for adding location data to images. The book includes sample photos taken with the creative options of the camera, including the Picture Control settings, which alter color processing of images; the Bird-watching, Moon, Creative, and Scene shooting modes, with settings optimized for subjects such as landscapes, pets, sunsets, and action shots; and the Coolpix P1000's features for burst shooting and time-lapse photography. In addition, the book provides introductions to topics such as street photography, infrared photography, and macro photography. The book also explains the video features of the P1000, which can shoot 4K video and can record high-speed video sequences at speeds up to four times greater than normal, resulting in slow-motion footage when played back. In addition, the book describes procedures for using the Filter Effects option to add special effects to images after they have been captured. In its three appendices, the book discusses accessories for the Coolpix P1000, including external flash units, microphones, remote control devices, cases, and charging and power options. The appendices also include a list of useful web sites and other references, as well as a section with iquick tips: to help users take advantage of the camera's features in the most efficient ways possible. This guide book to the P1000 camera includes a detailed Table of Contents and Index.

This is a rare book on a rare topic: it is about 'action' and the Principle of Least Action. A surprisingly well-kept secret, these ideas are at the heart of physical science and engineering. Physics is well known as being concerned with grand conservatory principles (e.g. the conservation of energy) but equally important is the optimization principle (such as getting somewhere in the shortest time or with the least resistance). The book explains: why an optimization principle underlies physics, what action is, what 'the Hamiltonian' is, and how new insights into energy, space, and time arise. It assumes some background in the physical sciences, at the level of undergraduate science, but it is not a textbook. The requisite derivations and worked examples are given but may be skim-read if desired. The author draws from Cornelius Lanczos's book "The Variational Principles of Mechanics" (1949 and 1970). Lanczos was a brilliant mathematician and educator, but his book was for a postgraduate audience. The present book is no mere copy with the difficult bits left out - it is original, and a popularization. It aims to explain ideas rather than achieve technical competence, and to show how Least Action leads into the whole of physics.

Explains how to use Himalayan salt blocks in seventy recipes that draw on a variety of cooking techniques, and provides an overview of the mineral's provenance and properties.

This insightful Handbook provides a comprehensive state-of-the-art review of business-to-business marketing. It supplies an overview and pioneers new ideas relating to the activity of building mutually value-generating relationships between organizations D from businesses to government agencies to not-for-profit organizations D and the many individuals within them. Comprising 38 chapters written by internationally renowned scholars, this Handbook presents perspectives of a variety of issue areas from both an academic and a managerial perspective (state of theory and state of practice). The material in this compendium includes theoretical and practical perspectives in business-to-business marketing, marketing mix and strategy, interfirm relationships, personal selling and sales management, technology marketing, and methodological issues central to business-to-business markets. Published in conjunction with Penn StateOs Institute for the Study of Business Markets, this extensive volume will expand research and teaching in business-to-business marketing in academia and will improve the practice of business-to-business marketing for firms in the industry. This path-breaking Handbook is targeted primarily at marketing academics and graduate students who want a complete overview of the academic state of the business-to-business marketing domain. It will also prove an invaluable resource for forward-thinking business-to-business practitioners who want to be aware of the current state of knowledge in their domains.

Business model innovations are conceived and implemented by a special type of entrepreneur: business model pioneers. This book presents 14 compelling case studies of business model pioneers and their companies, who have successfully introduced new business ideas to the market. The examples range from industries such as retail, media and entertainment to services and industrial projects. For each example, the book provides information on the market environment at the time of launch and illustrates the driving forces behind these business models. Moreover, current market developments are highlighted and linked to the evolution of the business models. Lastly, the authors present the profile of a typical business model pioneer.

n the future, shopping will be greatly influenced by a combination of localization issues, mobile internet at the point of sale, and use of social networks. This book focuses on the 'SoLoMo synergies' that arise from this paradigm shift in future shopping, which also promises new and effective marketing options for traditional retailers. It also reflects the current status of research and business practice, analyzing the basic factors of SoLoMo in detail. The importance of Location-based Services (LBS) is elaborated and analyzed in an empirical study using a market based case of kauDA ¶ a leading German online shopping network. The evidence shows that customers see LBS as an attractive tool and are prepared to change their buying behavior. Though LBS is still in its early stages and its professional longevity remains to be seen, it also promises tremendous potential for the future.

We know much more about the global politics of intellectual property than we do about national political contests over the ownership of knowledge. Haunss and Shadlen have identified this gap in the literature and have done a fine job of bringing together a set of essays that helps to fill this gap in our understanding of the multi-layered nature of intellectual property politics. Peter Drahos, The Australian National University, Canberra This thought-provoking volume provides invaluable new insights and is a major contribution to the debate on the politics of intellectual property rights. Duncan Matthews, Queen Mary, University of London, UK This book offers empirical analyses of conflicts over the ownership, control, and use of knowledge and information in developed and developing countries. Sebastian Haunss and Kenneth C. Shadlen, along with a collection of eminent contributors, focus on how business organizations, farmers, social movements, legal communities, state officials, transnational enterprises, and international organizations shape IP policies in areas such as health, information-communication technologies, indigenous knowledge, genetic resources, and many others. The innovative and original chapters examine conflicts over the rules governing various dimensions of IP, including patents, copyrights, traditional knowledge, and biosafety regulations. Written from a political perspective, this book is a must-read for political scientists, sociologists and anthropologists who study IP and conflicts over property. It is also an essential read for stakeholders in institutions, NGOs and industry interested in knowledge governance and IP politics.
