This interdisciplinary handbook provides extensive information about research in medieval studies and its most important results over the last decades. The handbook is a reference work which enables the readers to quickly and purposely gain insight into the important research discussions and to inform themselves about the current status of research in the field. The handbook consists of four parts. The first, large section offers articles on all of the main disciplines and discussions of the field. The second section presents articles on the key concepts of modern medieval studies and the debates therein. The third section is a lexicon of the most important text genres of the Middle Ages. The fourth section provides an international bio-bibliographical lexicon of the most prominent medievalists in all disciplines. A comprehensive bibliography rounds off the compendium. The result is a reference work which exhaustively documents the current status of research in medieval studies and brings the disciplines and experts of the field together.

This state-of-the-art Research Handbook provides an overview of research into, and the scope of current thinking in, the field of big data analytics and the law. It contains a wealth of information to survey the issues surrounding big data analytics in legal settings, as well as legal issues concerning the application of big data techniques in different domains.

This book reconsiders the linguistic notion of emphasis. For many, the concept of emphasis is confined to information structure. However, our understanding of the grammatical reflexes of emphasis is only partial as long as the expressive side of utterances is not taken into account. The book explores similarities, differences, and interactions between information structure and the expressive dimension of language in the domain of natural language grammar. Specifically, this monograph demonstrates that specific word order options, sometimes in combination with discourse particles, yield meaning effects that are typical for the expressive side of utterances and endow them with an exclamative flavor. Approaching this issue from a syntactic point of view, the book shows that there are syntactic categories (e.g., a certain class of particle verbs) and word orders (e.g., certain fronting patterns involving discourse particles) that directly connect to expressive meaning components. The work presented in this monograph combines theoretical analysis with experimental evidence from both perception and production studies.

The circular economy describes a world in which reuse through repair, reconditioning and refurbishment is the prevailing social and economic model. The business opportunities are huge but developing product and service offerings and achieving competitive advantage means rethinking your business model from early creativity and design processes, through marketing and communication to pricing and supply. Designing for the Circular Economy highlights and explores ' state of the art ' research and industrial practice, highlighting CE as a source of: new business opportunities; radical business change; disruptive innovation; social change; and new consumer attitudes. The thirty-four chapters provide a comprehensive overview of issues related to product circularity from policy through to design and development. Chapters are designed to be easy to digest and include numerous examples. An important feature of the book is the case studies section that covers a diverse range of topics related to CE, business models and design and development in sectors ranging from construction to retail, clothing, technology and manufacturing. Designing for the Circular Economy will inform and educate any companies seeking to move their business models towards these emerging models of sustainability; organizations already working in the circular economy can benchmark their current activities and draw inspiration from new applications and an understanding of the changing social and political context. This book will appeal to both academia and business with an interest in CE issues related to products, innovation and new business models.

Since 2017, the United States and Europe—among many other refugee-hosting countries—have made significant changes in their refugee policies. New visa restrictions, travel bans, and other regulations were imposed by national governments. At the local level, towns and cities responded in different ways: some resisted national policy by declaring themselves "sanctuary cities", while others supported exclusionary policies. These different responses influenced refugees' ability to settle and become integrated. The Refugees in Towns (RIT) project at Tufts University explores local urban integration experiences, drawing on the knowledge and perspectives of refugees and citizens in towns around the world. Since 2017, more than 30 RIT case studies have deepened our local knowledge about the factors that enable or obstruct integration, and the ways in which migrants and hosts co-exist, adapt, and struggle with integration. In this Special Issue, seven articles explore urban integration in towns in Europe (Frankfurt-Rödelheim, Germany; Newcastle, UK; Ambertois, France; Italy 's cities; and Belgrade, Serbia) and in North America: Bhutanese refugee-hosting US cities, and Antigonish, Canada. The papers explore how refugees and citizens interact; the role of officials and politicians in enabling or obstructing integration; the social, economic, and cultural impact of migration; and the ways—inclusive or exclusive—locals have responded.

This is the screenplay for the acclaimed film, directed by Wes Anderson. There were three extraordinary children in the Tenenbaum family: Chas Tenenbaum (Ben Stiller) was a financial expert and started buying real estate in his early teens; Margot Tenenbaum (Gwyneth Paltrow) was an acclaimed playwright and won a Pulitzer Prize in the 9th grade; Richie Tenenbaum (Luke Wilson) was a champion tennis player ranked 2nd in the world by the age 17. They were brilliant. They were famous. They were unlucky enough to be the children of a man named Royal Tenenbaum (Gene Hackman). Now for the first time in 25 years, they're all living together under the same roof. After having largely gone their separate ways they're looking to mend fences—and themselves in the process.

Advance Praise for Dynamic Urban Design " Finally, in one book a complete guide to the theory, practice, and potential of urban design by one of Canada 's preeminent urban designers. " —David R. Witty, former dean, School of Architecture, University of Manitoba, Canada " Michael von Hausen has given us a clear and hopeful path to the creation of a sustainable urbanism, one that will be inspiring and instructive to practitioners, students, and all those who are focused on the most fundamental issue of our time. " —Jim Adams, architect and principal, McCann Adams Studio, Austin, Texas " Dynamic Urban Design establishes Michael von Hausen as a sustainable urban design authority. Sharing insights taken from six millennia ... von Hausen articulates a clearly understandable and masterfully illustrated process. " —Kevin Harris, architect and principal, Kevin Harris Architect, Baton Rouge, Louisiana Whether we are practicing urban designers or interested citizens, virtually all of us want to live in communities that are safe, attractive, and healthy. Yet our good intentions face conflicting goals. How are we going to improve community health, reduce crime, and improve mobility in cities while at the same time expanding our cities to accommodate growth? How are we going to do all this with seemingly limited financial resources? How do we do more with less, live within our means, and still create a higher quality of life? The list of challenges is almost endless. Urban design is emerging as a critical interface that brings various professions together to address these challenges and improve our communities. For future human survival and quality of life, the world needs a more inclusive, rigorous, socially inspired, and comprehensive urban design model integrated with sustainable development. This book delivers that model—a reference guide for doing it right.

The papers in this volume study how all language levels are constantly involved in promoting insignificant places as desirable tourist destinations. Drawing on different communicative practices from various cultures, the case studies show that language use and the concept of the 'tourist gaze' are in a permanent strategic interplay.

The overall aim of the book is to introduce students to the typical course followed by a data analysis project in earth sciences. A project usually involves searching relevant literature, reviewing and ranking published books and journal articles, extracting relevant information from the literature in the form of text, data, or graphs, searching and processing the relevant original data using MATLAB, and compiling and presenting the results as posters, abstracts, and oral presentations using graphics design software. The text of this book includes numerous examples on the use of internet resources, on the visualization of data with MATLAB, and on preparing scientific presentations. As with its sister book MATLAB Recipes for Earth Sciences – 3rd Edition (2010), which demonstrates the use of statistical and numerical methods on earth science data, this book uses state-of-the art software packages, including MATLAB and the Adobe Creative Suite, to process and present geoscientific information collected during the course of an earth science project. The book's supplementary electronic material (available online through the publisher's website) includes color versions of all figures, recipes with all the MATLAB commands featured in the book, the example data, exported MATLAB graphics, and screenshots of the most important steps involved in processing the graphics.
