Physioex Exercise 3 Answers - 12/2020 - Course f
8/14/2020 PhysioEx Exercise 9 Activity 6 4/4 Your answer: ADH is released from the posterior pituitary gland when there is a decrease in osmolality over 1%. This shows that there is too little water in the body, and water should not be excreted. ADH is then released to act on the collecting ducts to prevent them from secreting water into the urine. Which hormone (aldosterone or ADH) has the ...
