REVIEW SETTINGS. As usual, the first change was to set the input to PC. This disables all unwanted options by default, and also drops the input lag to a minimum. The brightness setting was increased by only one. This isn't for the luminosity of the screen. If you want to change the luminosity of the screen, play with the backlight setting instead.

Sharpness: This setting increases edge contrast to make objects more distinct, but resolution remains the same. Too little sharpness results in a soft-looking picture, while too much sharpness makes the image look harsh. If you use this setting, apply it as minimally as possible (25% or less). Color: Adjusts color intensity (saturation). Too much color will look intense, too little color look too subdued or even "grayish."

We observed a few quirks which confirmed that the Samsung F6400 features a different video processing chip from the one implemented on the step-up F7000 series. When fed with our battery of standard-definition test patterns, the UE-40F6400 exhibited more ringing during the upconversion process, and slightly more jaggies for video-based material, though these were hardly distracting in real ...

Calibration. Note: Our review sample was calibrated using CalMAN 5, the industry-leading video calibration software.

Greyscale. Setting the UE32F6400 to [Movie] mode with a default [Colour Tone] of “ Warm 2 “ , the Samsung produced a greyscale with excessive green and underfilled blue. The image took on a greenish tinge, but thankfully the company offers an excellent array of calibration tools at our disposal, so this should be easily corrected.

Unless there is a lot of window light coming into the room these settings should work well. If that is the case try turning up the backlight and if that still is not bright enough then go to the Standard setting.

You would only need these options.
